Intelligent spreader roll for proactive maintenance

SmartBow is new one-of-a-kind spreader roll which enables entirely proactive maintenance. Internal roll measurements include humidity and temperature.

SmartBow recognises problematic conditions

SmartBow recognises conditions leading to problems in advance – inside the roll. With SmartBow you know your bow angle, running time and roll condition. SmartBow monitors roll speed which brings major increase to roll's running life.

SmartBow

By Finbow

Features

- Roll temperature monitoring
- Internal moisture control
- Electronic bow direction indication and control
- Roll specific speed indication with alarms for critical speeds
- Automated end sealing grease addition
- Vibration measurement

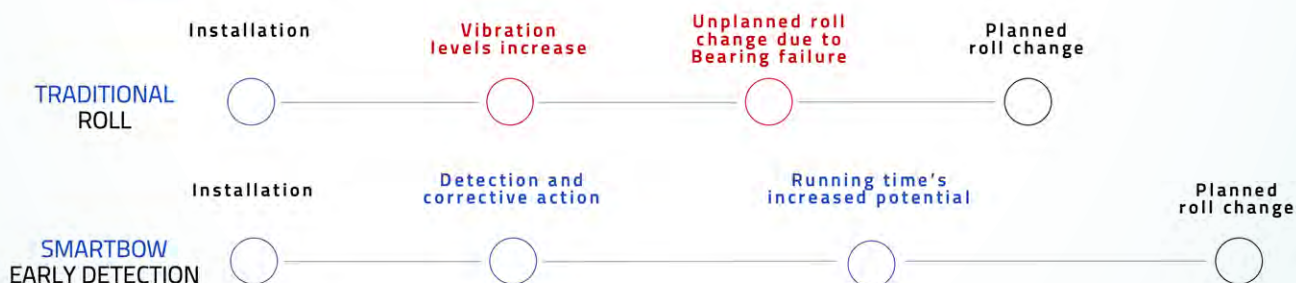

Benefits

- Increased running time
- Predictable removal for service
- Advanced data collection for process development
- Decreased running cost per hour
- Safe reading of bow direction

Monitoring and alarms can be provided with cloud based technology or through your own control system.
